==========

# Facts for Claude to Remember

- I need to create a one hour video to present and record on Webex.
- It is a class to present to Michigan Fair Elections Institute(MFEI) volunteers
- The class is to help them understand how to get best results from working with LLM AI
- The volunteers have varying levels of experience in AI use
- The role of critical thinking in receiving quality results
- How to present information to AI to be specific in what is the context of the inquiry to receive focused answers
- The technique of iterating Q & A to achieve correctly focused answers.
- Steering the volunteers to tutorials at the Anthropic web site and other resource providers with subjects about framing questions and working with LLM AI
- I want to make a slide presentation that will allow extensive time on each slide to absorb the information and stay within one hour time constraint. Would 20 slides be possible in that environment?
- I think I would like to use this preparation for the video as an example of doing work with LLM AI
- How do you suggest I do this step by step?
